

AKANKSHA KUMARI

Software Engineer | Python · Java · React · AWS · Agentic AI · LangChain

New Delhi, India | +91 8306547755 | akankshakumari6975@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Final-year B.Tech IT student (CGPA: 8.17/10, 2026 batch) with production experience building AI agents, serverless cloud pipelines, and full-stack applications at Samsung R&D Institute. Hands-on with Python, Java, React.js, AWS, REST APIs, and actively working with LangChain and LangGraph for agentic AI development. Strong foundation in writing clean, testable, and well-documented code that works in the real world.

WORK EXPERIENCE

Software Engineer Intern | Samsung R&D Institute Delhi (SRID)

Jan 2026 – Present

- AI Powered Log Analysis Agent — 80% reduction in manual effort:** Built end-to-end AWS serverless pipeline (S3, Glue, Athena, Lambda) to automatically ingest and process daily service logs; integrated AWS Bedrock to generate plain-English summaries — zero production incidents post-deployment. [View Project →](#)
- Movies Row Curator Agent (In Progress):** Building an AI agent that understands natural language queries — classifies user intent by extracting attributes like genre and content type to curate personalised content rows in real time.
- Secure, production-grade delivery:** Wrote well-documented Python and SQL modules with input validation and secure coding practices; resolved 15+ cross-system defects through structured code reviews; set up automated monitoring via EventBridge and SNS.

Full Stack Developer Intern | Ethinos Digital Marketing

May 2025 – Aug 2025

- 3 client applications delivered, zero escalations:** Built and maintained PHP, WordPress, and Shopify web solutions with design and QA teams; wrote Python automation scripts for bulk updates across 1,000+ pages; debugged production issues across multiple environments.

PROJECTS

Agentic Research & Web Search Agent (Ongoing) | Python · LangChain · LangGraph · LLMs

- Multi-step agentic AI system using LangChain + LangGraph:** Building a research agent with stateful graph-based orchestration, tool calling, and LLM-powered web search — hands-on work with multi-agent workflows, memory management, and real-world edge case handling.

JobGenie – AI-Powered Job Search Application | React.js · Node.js · REST APIs · Git

- Full-stack app built independently:** React.js frontend + Node.js backend that pulls live job listings from multiple REST APIs; wrote unit and integration tests on all core modules; version-controlled with Git branching.

Movie Recommendation System | Python · TF-IDF · Streamlit · SQL · Machine Learning

- Content-based ML engine with interactive UI:** Vectorized 10,000+ records with TF-IDF; deployed Streamlit interface returning recommendations in under 1 second; SQL-backed data layer; fully documented.

Secure OTP Email Verification | Java · Python · SMTP · OTP

- Security-first backend module:** Built time-bound OTP verification with input validation, error handling, and secure coding practices — clean, well-documented code in Java and Python.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C, C++

Agentic AI & LLMs: LangChain, LangGraph, AWS Bedrock, Agentic AI, Prompt Engineering, LLMs

Backend & APIs: REST API Development, Node.js, OOP, Secure Coding, Spring Boot (Learning)

Frontend: React.js, HTML5, CSS3, JavaScript

Cloud & DevOps: AWS (S3, Lambda, Glue, Athena, EventBridge, SNS, DynamoDB)

Databases: MySQL, SQL, AWS Athena, Relational Databases

Tools: Git, GitHub, IntelliJ IDEA, VS Code, Code Reviews, Unit Testing

EDUCATION

B.Tech – Information Technology | Banasthali Vidyapith

2022 – 2026 | CGPA: 8.17 / 10.0
